

FOR IMMEDIATE RELEASE

REPKIN BIOSYSTEMS PRODUCT TO APPEAR ON ABC 7 CHICAGO

10 SEPTEMBER 2008(Chicago)

Repkin Biosystems' Living Wall Panel product will appear on ABC 7 Chicago Friday, 12 September, 2008 on the 5 p.m. news as part of their special series "Live Green With ABC 7". The segment resource page is :

<http://abclocal.go.com/wls/story?section=news/local&id=6387760>

The topic for Friday is green walls and use of plants within the home to purify air. Houseplants have been shown to reduce or eliminate hazardous materials found in household air such as formaldehyde, benzene, toluene, trichlorethylene and many more.

Repkin Biosystem Living Panel product is special in that a large number of plants can be grown in an unused real estate asset in the home - the walls.

"Instead of taking up floor space, you can hang these panels like a picture", says Michael Repkin "I always hear people asking me how much space all these plants will take up, now I tell them - viturally no space at all".

"These panels can used individually or as an array based on the desired amount of plants and the area to be covered. They take very little maintenance once acclimated to their new home, and can keep living as long as they receive water, light and carbon dioxide - so make sure to talk to them alot" says Repkin

The panels are scheduled to be produced for sale this fall and are produced right here in Chicago.

Previously aired was a story on Repkin Biosystems use of rooftops for food, fuel and fiber production. The story can be viewed at:
