

Water Utilization: Dining and Food Preparation Object Decontamination

METHOD 1

1

Remove as much food contamination from item in compost receptacle

2

Place items in basin 1
Technician will rinse item or fill pan with detergent filled water

3

Technician will cover item with detergent and scrub item with sponge or pad and place in basin 2.
Items will be covered in foam for 15 minutes.

4

After allowing foam to sit on contaminated items, technician will transfer to basin 3 for rinsing

5

When rinsing, water shall be collected in basin 3 and rinsed items will be transferred to drying rack or other drying area

6

Water from basin 3 will be passed through a coarse particle filter and then placed into a water storage vessel for use as primary wash water
